

Lylia Mesa

Product Management Intern — AI, HCI & Spatial Computing | MEng @ Télécom Paris (IP Paris)

lylia.mesa@telecom-paris.fr · +33 7 68 22 72 57 · [linkedin.com/in/lylia-mesa](https://www.linkedin.com/in/lylia-mesa) · github.com/natsxki · natsxki.github.io/portfolio

French & Japanese (native, JLPT N1) · English & German (C1) · Available: Summer 2027

Education

Télécom Paris, Institut Polytechnique de Paris

Paris, France

MEng / Diplôme d'Ingénieur (grade de Master, Bac+5) — in progress

2024 — Expected 2028

- Majors: Data Science & AI + 3D Graphics & Interaction (HCI) · Ranked #2 in France (QS 2026)
- **BSc in Engineering (equivalent)** — completed July 2026, 240 ECTS validated · **GPA 3.58 / 4.0** (final year 3.73)
- Coursework: Human-Computer Interaction, Interaction Design, Information Visualisation, Machine & Deep Learning, Computer Graphics, Web & Mobile Development

Lycée Michelet — Classes Préparatoires (CPGE), filière PSI

Vanves, France

Selective 2-yr intensive program in mathematics & physics; national competitive-exam entry to French engineering grandes écoles
2022 — 2024

Product & Technical Projects

Voice-Driven VR Architecture Studio

Unity, Meta Quest, Gemini API

Group project — led UX/interaction design & system architecture

2026

- Ran discovery interviews with an architecture researcher, identified slow 3D design iteration as the core unmet need, and chose a voice-first VR workflow over controllers to lower the barrier for non-technical users
- Across 7 iterations with 9 testers, added a voice-summary confirmation step after 3 users self-corrected mid-speech — trading instant output for fewer costly mis-generations

Social Photo-Editing App

React Native, Expo, Skia (GLSL shaders)

Every edit is a copyable recipe — solo-designed product, in closed beta

2026

- Designed the core loop around a user insight — creators had no simple way to share reusable edits — so any photo's exact settings copy in one tap from an AI-searchable explore feed
- Shipped a creator incentive system (earn from posts & saves, spend on boosts) to closed beta; ~21% of the 34-user cohort returned in week one

Review Sentiment Analysis Platform

BERT/RobERTa, Django, Leaflet.js

Turning ~3,000 unstructured reviews into decisions for non-technical users

Jan — Jun 2025

- Distilled ~3,000 free-text Google reviews into location-level sentiment on a map — adopted by a social-studies research team to track how events (COVID lockdowns, strikes) shifted local reputation (Transformer pipeline, 86% accuracy)

Accessibility-Focused Sports Vision System

Python, OpenCV, YOLOv9, Arduino

Nationwide competitive engineering project — top 3% of candidates, 20/20

2023 — 2024

- Chose accessibility within an open sports brief — built assistive object-tracking to help visually-impaired spectators follow live play, evaluating 60 camera placements for accuracy trade-offs (180 ms inference, ~6 m localisation error)

Experience

EY — Strategy & Technology Consulting Intern

Paris-La Défense, France

Rotational programme: EY-Parthenon (Strategy), Consulting, Assurance & Financial Services

Jun — Jul 2025

- Scoped a vague brief (how teams adapt to new tech) down to AI adoption and ran 12 interviews with EY teams — mapping tools, workflows, unmet needs and readiness
- Synthesised the findings into skills- and tooling recommendations for AI adoption, presented to EY managers

ArianeGroup — Software Engineering Intern

Bordeaux, France

Gap-year internship (Part 1): industrial-grade software for European space launchers

Jul 2026 — Feb 2027

- Defining test-automation requirements with the engineering teams who rely on daily collaborative apps, then building a Python/Selenium/Jenkins non-regression suite to replace manual validation — targeting shorter release cycles and de-risked launches

Paris 2024 Olympic Games — Assistant to the President, Japanese Olympic Committee

Paris, France

VVIP operations & trilingual stakeholder liaison (JP/FR/EN)

Jul — Aug 2024

- Coordinated Japanese Olympic Committee operations with Paris organisers under rapidly shifting constraints — balancing competing stakeholder priorities across three languages (JP/FR/EN) to keep VVIP operations on schedule

DataAnnotation — AI Evaluator (part-time)

Remote

LLM quality evaluation for frontier AI models

May 2026 — Present

- Evaluate frontier LLM outputs across safety, reasoning and instruction-following in 4 languages — surfacing multilingual failure patterns that feed model iteration

Leadership & Campus Impact

- **Student Board, Télécom Paris — Travel & Audiovisuals Lead:** owned budget allocation and logistics for a EUR 20,000, 90-person trip — resource prioritisation under fixed constraints; produced student-life media (DaVinci, Lightroom)

- **Télespoir (humanitarian club) — Communications & Corporate Relations Lead:** raised EUR 10,000 in sponsorships for the annual mission (Togo, 2025); designed events and campaign visuals (Illustrator, Canva)

- **Comète (audiovisual club) — Secretary General:** prototyped a face-search feature letting students find their own photos in a ~50,000-photo/year archive; paused rollout after assessing GDPR/biometric-data compliance — a deliberate ship/no-ship call

Skills

- **Product & Design:** product & customer discovery, user research & usability testing, roadmapping & feature prioritisation, product requirements, MVP & hypothesis validation, trade-off analysis, interaction design (HCI), wireframing (Figma)

- **Tech Stack:** Python, SQL, C++, JavaScript · PyTorch, OpenCV, Transformers · Unity, OpenGL/GLSL, Three.js, React Native · REST APIs, Git
